

NUR RAHMAN SHALAHUDIN

AI WORKFLOW AUTOMATION ENGINEER

Depok, Indonesia (open to remote) | +62 812-9465-2263 | nrshalahudin@gmail.com

[AI automation portfolio](#) | [Data portfolio](#) | [GitHub](#) | [LinkedIn](#)

PROFILE

I design n8n and AI workflows that turn raw input into reviewable, deployable output. Sleyd is my live presentation SaaS; the accompanying form workflows cover document-to-deck, section-based scrollytelling, and data-to-notebook generation. My background in analytics and laboratory quality control shapes how I validate data and handle failures.

TECHNICAL STRENGTHS

Automation: n8n, form triggers, branching, loop/merge patterns, webhooks, HTTP APIs, validation and callbacks.

AI and data: OpenAI, Gemini, DeepSeek, structured JSON, prompt design, Python, Pandas, SQL/PostgreSQL, data profiling and KPI design.

Product delivery: TypeScript/JavaScript, React, Express, Firebase/Firestore, Vercel, HTML sanitization and payment integration.

SELECTED AUTOMATION BUILDS

Sleyd AI | Founder and full-stack builder | live SaaS | 2026-present [Live site](#)

Project Overview. A solo-built, live presentation SaaS that turns text, files or voice into a shareable deck URL with PPTX/PDF export.

Problem. Turning text, files and voice input into a usable presentation required orchestration across extraction, AI generation and publishing.

Built. Built five n8n workflows (~68 nodes), a 27-node core pipeline, an Express/Firebase backend and a four-model fallback chain; generated web decks can be exported to PPTX/PDF.

Outcome. The product runs as a live SaaS with job state, signed callbacks and a 15-minute stalled-job recovery path.

Sleyd Presentation | Form workflow | 35-node n8n export

Project Overview. An inactive form-workflow export for turning uploaded source material into a reviewed slide plan and publishable HTML.

Problem. Uploaded materials and revisions need to become a coherent slide plan before any page is rendered.

Built. Designed PDF/DOCX/PPTX extraction, input validation, content classification, outline review and edits per slide, image retrieval, HTML sanitization, and a Vercel deploy-and-alias path.

Outcome. The export defines review and validation checkpoints from uploaded source to publishable HTML; production usage is not measured in this file.

Sleyd Scrollytelling | Form workflow | 29-node n8n export

Project Overview. An inactive form-workflow export for planning and rendering section-based visual stories with human edits before publication.

Problem. Long-form visual stories need consistent structure across sections while allowing human edits before publication.

Built. Designed input sanitization, AI outline review per section, section edits, looped rendering, image retrieval, HTML sanitization, and Vercel deployment.

Outcome. The workflow separates narrative planning from section rendering and publishing; the export does not provide adoption or time-saved metrics.

SELECTED AUTOMATION BUILDS / CONTINUED

AutoData Analyst | Data-to-deck and notebook | 25-node n8n export

Project Overview. An inactive form-workflow export for turning CSV, TSV, Excel or JSON inputs into a visual deck and reviewable notebook.

Problem. Mixed spreadsheet and data files demand repeated cleaning, profiling and KPI preparation before a report can be written.

Built. Routed CSV, TSV, XLS, XLSX and JSON inputs through extraction, health audit, cleaning, aggregation and KPI stages; added an LLM narrative step, HTML scrollytelling deck, Jupyter notebook, artifact checks and email delivery.

Outcome. One form-backed flow is designed to produce both a visual deck and an inspectable notebook. The export does not establish runtime savings or client deployment.

PRODUCT ENGINEERING

Sleyd AI | Backend, reliability and payments | 2026-present Portfolio

Project Overview. The live SaaS backend owns job state and payment outcomes across long-running n8n work. Built Express/Firebase job handling with signed webhooks, a server-owned coin ledger and Midtrans signature checks. Added sanitation, download limits, rate limits and refund handling; the original CV reports roughly 4,800 lines of backend code.

RELATED ANALYTICS WORK

PT Gagas Envirotek | Customer and growth analysis | 2026 Case study

Project Overview. Two linked studies of 2020-2025 laboratory-equipment orders for sales prioritization and growth planning. Cleaned 1,575 purchase orders, applied RFM and 24-month CLTV to 314 accounts, and built cross-sell and retention models. Holdout cross-sell AUC reached 0.97; the output ranked accounts for follow-up.

PT Andaru Persada Mandiri | Revenue concentration | 2026

Project Overview. A separate client study of 2013-2023 purchase-order histories to diagnose volatile sales and customer dependence. In the 2013-2017 portion, 24 accounts held 58.5% of revenue, making concentration visible for planning.

EARLIER EXPERIENCE

PT Pertamina Lubricants | Senior Laboratory Analyst | Feb 2017-Apr 2023

Performed lubricant quality testing against ISO/ASTM methods and managed laboratory records. The supplied CV reports a 15% reduction in testing defects and Best Employee recognition in 2021.

EDUCATION AND CREDENTIALS

STAI Al-Hikmah Jakarta | Bachelor's, Islamic Communication & Broadcasting | 2020-2024

Politeknik AKA Bogor | Diploma, Chemical Analysis | 2012-2015

Rakamin Academy | Data Science Bootcamp, 87.74/100 (Excellent); Runner-Up Best Final Project Team

Additional certificates listed in the supplied CV: Google Data Analytics (Coursera); Certified Lubricant Analyst (PPSDM Migas Cepu).
